

R5NXT

Creator: RAGNARS DESIGN/JOHAN RAGNAR

RAGNARS

WHY R5NXT?

- Tactile materials
- Interchangeable parts
- Life expectancy > 20 years
- Hidden cable management
- The fastest height adjustment on the market

The R5 Nxt station is the updated version of the classic Ragnars Work R5 that was introduced in 2001. With new features in solid wood and high-end technical solutions this R5 Nxt provides something extra to the workplace. Combined with a modern biophilic approach and focus on sustainability the R5 Nxt station is a highly competitive product on today's and tomorrow's market.

Thanks to the new LINAK DL Plus components the R5 Nxt station has a quieter and faster height adjust-

ment enabling a speed of 80 mm/s, which is the fastest on the market today. This workstation has also been upgraded with unblemished columns, something that has been requested for quite some time.

DESIGN

The R5 Nxt station has a relatively neutral design but still stands out, thanks to the biophilic approach where metal parts are replaced by wood.

The split table top is a stylish,

simple and practical way of hiding cables but also an easy way to access the cables when needed. The beautifully designed cable tray in wood or Valchromat adds a finishing touch to the table.

The table top is available in linoleum or Valchromat's environmental friendly colored through MDF with possibilities to choose between a range of different colors. These are easily matched with the FSC-certified wooden details available in walnut, oak or white stained ash.

Like all Ragnars products the R5Nxt station can be customised to meet your requirements.

SUSTAINABILITY

Since sustainability is important to us at Ragnars we have made it possible to upgrade the previous workstation series Ragnars Work R5 with components from the R5 Nxt series. In this way, you can upgrade the office with a completely new look while keeping sustainability in mind.

FORM

- An upgrade of our classic Ragnar's Work R5 series.
- Tactile materials such as solid wood and furniture linoleum.
- A beautifully designed cable tray - in different wooden based materials.
- Control unit is available in anodized aluminium or black anodized aluminium.
- The feet are made of metal and solid wood and are treated with hard wax oil.
- Upgraded with unblemished columns, something that has been requested for quite some time.
- Control unit can be placed horizontally which is more traditional or vertically for a more unique expression.
- The series has a relatively neutral design but still stands out, thanks to the biophilic approach where many metal parts are replaced with wood.

FUNCTION

- A soft start and stop function.
- Possibilities to adjust the height of the cable tray.
- The fastest height adjustment on the market with LINAK DL Plus components - 80mm/s.
- The control device only emits a discreet sound despite the possibility of a quick height adjustment.
- The split table top is a stylish, simple and practical way of hiding cables but also an easy way to access the cables when needed.

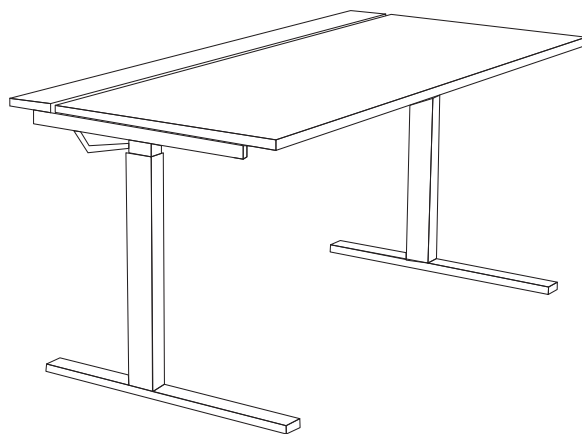

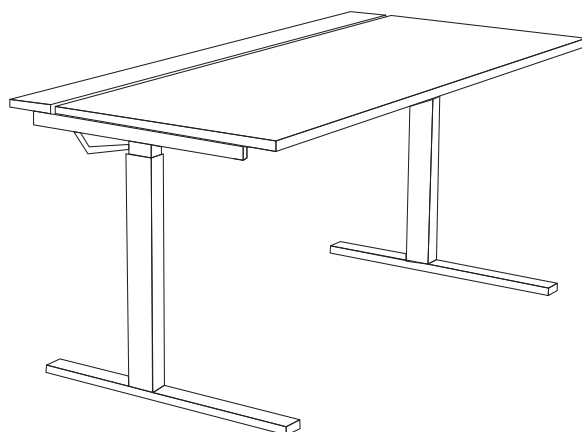

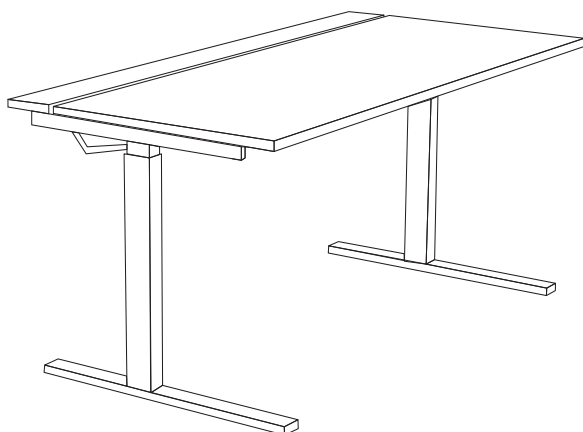

SUSTAINABILITY

- PVC-free electronics.
- Life expectancy > 20 years.
- Standby consumption is less than 0.1W.
- All parts are replaceable, which extends the life cycle of the product.
- It is possible to upgrade the previous work station series Ragnars Work R5 with components from the R5 Nxt series.
In this way, you can upgrade the office with a completely new look while keeping sustainability in mind.

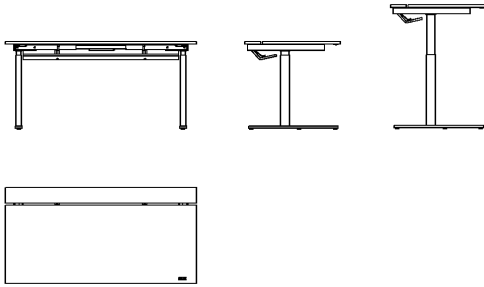

FACTS

- The table top is available in furniture linoleum in different colors from Forbo and in Valchromat's colored through MDF.
- Cable tray, sidewing and feet are available in different sorts of solid wood or in Valchromat's colored through MDF.
